

Yampa River Leafy Spurge Project
Leafy Spurge Invasion Risk Modeling
Moffat and Routt Counties

- Lowest Suitability
- Low Suitability
- High Suitability
- Highest Suitability

Leafy spurge is capable of aggressively invading most habitats in Moffat and Routt counties. Note that these regional-scale categories cannot represent local habitat variability, such as the presence of environments better suited to leafy spurge in small drainage bottoms. Further, a specific vector for the introduction of seed or root stock will also facilitate invasion even in the least suitable areas.
